

## Open Team is looking for a Ruby on Rails Developer (internship)

Are you passionate about backend development and an adept of Ruby On Rails? Are you sensitive to what you consume? Do you want to do dev for a project of general interest where you can contribute to change through action?

In close collaboration with the Product Owner, you will participate in the development of future versions of the global social network dedicated to sustainable development. You will also be proposing solutions when the team will face technical challenges, and to improve the user interface and user experience. We love learning, sharing, discovering, trying ... so we are looking for a developer who wants to learn from us and to constantly improve on new architectures, new techniques, while getting involved in an open-source project!

Bring your energy, join Open Team!

### **What we develop**

Open Team is an accelerator of environmental startups. We have created a community of 1000 startups / NGOs around the world, and 26000 citizens who want to help them. To orchestrate this community, we have developed the first global social network for sustainable development, the "O" platform, which will serve as an eLearning platform to document, share, access the know-how of startups wishing to share their social innovations for the future. All this for the common good.

### **Our technical environment**

Ruby on rails, SQL Postgre, Angular, jQuery, Gitlab.

During the internship, a complete overhaul of the front end layer will be carried out (functional, ergonomic and technological overhaul). You will have to work on this revamp with a front end developer and a designer.

### **Our areas of action**

The projects we met from the beginning of our adventure led us to develop a particular focus on the following themes: reforestation, agroforestry, responsible consumption, food security, education, gender equality, renewable energies, respect for indigenous cultures... which are all interconnected topics.

### **Your role:**

Alongside our Product Owner, you will:

- Develop and maintain the existing backoffice
- Develop new features
- Regularly suggest new features # R & D

### **What is expected of you for the application**

- A complete CV highlighting your professional experiences
- Send us one or more projects (Github / website) you are most proud of!
- Societal or environmental issues that you care most about

### **What are the required human skills?**

On the human level, we are looking for someone sociable, curious, rigorous, proactive, open-minded, who knows and likes to work in a team, and who wants to join, not only an awesome startup, but most importantly a dedicated, young and dynamic team :)

### **What are the required technical skills?**

- Develop and maintain the entire back office of the "O" platform
- Perform unit and integration tests
- Participate in the development of the backend
- Creating APIs for iOS and Android apps
- Develop new features
- Link with various APIs (MailChimp, Sendgrid, Heroku)
- Master Github versioning tools
- Have a product design sensibility
- Be proactive in the choice of technologies / architecture dedicated to needs
- Be proactive in the functional scope of the new features to be developed
- Knowing how to work in a team
- Justify a first experience in a similar position
- Participate in the design of the technical architecture of the new functionalities that you develop, in collaboration with the Technical Lead,
- Develop new features from back-end to front-end,

- Present the latest features and work done to the team.

Do you check most (or, even better, all) of these boxes ?! Then you are certain that we will call you! :)

### **Practical information:**

- Type of contract: Internship
- Vacant position: ASAP for 4 months
- Workplace: 36, rue du Caire 75002 Paris (in front of Numa) Metro: Sentier
- Desired Availability: Full Time
- Remuneration: 700 € / month
- Experience:> Bac +3
- Contact: join@openteam.co

### **Our team**

We are an intergenerational team, young in spirit, working a lot remotely and in an English-speaking environment. By joining the project, you will meet beautiful people, deeply human, showing respect and open-mindedness. Whether you are based in Paris or elsewhere, you can join our team.

### **To know more about Open Team**

Open Team is a non-profit organization created early 2015 following the 20th annual UN Climate Conference (COP20) in Peru. The team of co-founders became aware of the effects of global warming and how governments are trying to coordinate their efforts to contain the devastating consequences on our environment. They were shocked to note the gap between the facts reported by the scientists presented in this closed ecosystem of negotiators, and the limited understanding that the public opinion has about this issue, which threatens the very survival of our civilization on a horizon of a century.

The Open Team wanted to respond to these challenges by creating an accelerator, the Scale School, with the goal to replicate large-scale social and environmental solutions on a large scale.

Thanks to the Scale School, entrepreneurs who have implemented innovative and mature solutions can pass on their know-how at large scale to emerging entrepreneurs who can be more efficient in replicating a proven solution.

The Accelerator and the team are based in Paris. We primarily support projects in developing countries.

The first project supported is called Spiral Farm House, located in Nepal and founded 5 years ago by Sudarshan Chaudhary. This young entrepreneur came back to his parents' farm after his master's degree in Kathmandu. His vision led him to turn the traditional farm into an organic farm, with the principles of

CONNECT TO THE NEXT LEVEL

biodynamics, to regenerate agricultural land damaged by fertilizers, bring food security to his village and train many young people and women on his techniques.

Through our support, the project aims to be accelerated to create a large network of hundreds of micro organic farms, organized into a cooperative, which will distribute its production to Kathmandu and other cities in the country.
